SUMMARY

Frontend Developer with hands-on React, TypeScript, SolidJS and JavaScript experience, having delivered production UI at Verba GTA and shipped 100+ client websites as a freelancer. Comfortable owning frontend architecture from scratch, integrating REST APIs and WebSocket for real-time features, and diagnosing state- and render-related performance issues. Looking to grow within a React/TypeScript team under senior guidance.

WORK EXPERIENCE

Frontend Developer — Verba GTA

Sep 2025 – Mar 2026 | Ukraine, remote

- Set up frontend project architecture from scratch (folder structure, base config, fonts, SCSS variables and mixins), establishing the foundation used across 40+ interfaces.
- Built interactive in-game UI flows (e.g. a gas station interface with fuel type/quantity selection) triggered by player location, translating game logic into responsive interface states.
- Shipped 30 of ~40 interfaces from Figma designs and built 30+ reusable custom components (buttons, inputs, checkboxes) in SolidJS and TypeScript.
- Migrated interfaces from mock data to WebSocket-based real-time data, handling state synchronization for live in-game updates.
- Fixed a 4-second modal-opening delay caused by parent-level re-renders cascading into the modal via props — resolved by relocating open-state closer to the modal and memoizing the handler with useCallback.
- Fixed data loss in child components caused by unreliable WebSocket-to-props propagation by introducing local component state with a fallback helper that re-requests data from the WebSocket connection when a loss is detected.
- Collaborated with the designer on UI/UX refinements beyond the Figma spec, improving interaction flow for players.

Case studies with screenshots and interface breakdowns: see [LinkedIn Featured section](#).

Frontend Developer — Freelance (Privacy Client)

May 2025 – Dec 2025 | Ukraine, remote

- Diagnosed slow load times and UI freezes caused by unstructured, monolithic CSS/JS files; refactored the codebase into logical modules (variables, fonts, layout, header, main, footer, block-based components) and ran each through CSS optimization tooling — cut load time from ~7s to ~2s (71%) across 100+ client sites.
- Fixed a 3-second delay in burger-menu opening by restructuring and optimizing the related CSS, reducing open time to ~1 second.
- Delivered 100+ responsive websites from Figma designs, building layouts for desktop, tablet and mobile in vanilla JavaScript, HTML and CSS.
- Extended a shared UI-block library by 30+ components to match new Figma designs and client requirements.

Case studies with screenshots and site examples: see [LinkedIn Featured section](#).

PROJECTS

RentalCar — car rental web app

[GitHub](#) | [Live demo](#)

React application with filtering and booking UI, deployed on Vercel.

Personal Portfolio

[GitHub](#) | [Live demo](#)

Personal portfolio site built with React and TypeScript, deployed on Vercel.

CURRENTLY LEARNING

Backend & fullstack fundamentals — NestJS, PostgreSQL, Prisma, API design, database modeling and authentication — alongside deepening React/TypeScript (hooks, state management, component architecture).

EDUCATION

Technical College, Poland — Computer Science Technician Diploma

2020 – 2025 | Programming fundamentals and web development basics

CERTIFICATIONS

GoIT — Fullstack Developer Program, 2024 – 2025, Ukraine, remote

SKILLS

- Frontend: React, TypeScript, JavaScript (ES6+), HTML, CSS, Next.js, SolidJS, Redux, SCSS, Tailwind CSS
- Also working with: Node.js, NestJS, Express.js, REST API, WebSocket
- Database: PostgreSQL, MongoDB
- Tools: Git, GitHub, Vite, Axios, Swagger, Figma, GitHub Copilot, Claude Code, Cline, ChatGPT, Gemini

LANGUAGES

Polish — Professional | Ukrainian — Native | Russian — Native | English — Conversational
