

Kyrylo Kakulia

Fullstack Developer

+48 733 849 367 | kkir614@gmail.com | [LinkedIn](#) | Poland

SUMMARY

Junior Fullstack Developer with hands-on JavaScript experience across the stack — React and Tailwind CSS on the frontend, Node.js/Express and NestJS on the backend. Delivered production UI at Verba GTA and shipped 100+ client websites as a freelancer, cutting load times by up to 71% and data-loading latency by 57% through practical work with REST APIs, WebSocket and the DOM. Solid programming fundamentals with a theoretical grounding in OOP; currently building working knowledge of Docker and expanding into backend fundamentals (PostgreSQL, Prisma). Comfortable with Git and looking to grow within a team through code review and hands-on mentorship.

WORK EXPERIENCE

Frontend Developer — Verba GTA

Sep 2025 – Mar 2026 | Ukraine, remote

- Cut interface development time by 2–4 hours per component, building 20 reusable UI components and layout patterns in SolidJS and TypeScript
- Reduced data-loading time by 57% (from ~7s to ~3s) by moving frequently used data into centralized state management
- Shipped 22 of 40+ (55%) interfaces from Figma designs, implementing UI logic and complex interactions in SolidJS, TypeScript and SCSS
- Migrated ~70% of mini-games from mock data to WebSocket, enabling real-time state updates • Eliminated UI freezes during drag-and-drop interactions by building global helper functions for real-time features

Self-Directed Learning — Backend & Fullstack Fundamentals

Mar 2026 – Present

- Transitioning toward fullstack development, studying NestJS, PostgreSQL and Prisma alongside core backend theory (API design, database modeling, authentication)
- Built working knowledge of Docker and containerization basics, and reinforced OOP fundamentals (classes, inheritance) through self-study
- Deepened React and TypeScript fundamentals — hooks, state management and component architecture — ahead of returning to the job market

Frontend Developer — Freelance (Privacy Client)

May 2025 – Dec 2025 | Ukraine, remote

- Reduced website load time by 71% (from ~7s to ~2s) across 100 client projects by optimizing CSS and frontend code
- Delivered 100 responsive websites from Figma designs, building layouts for desktop, tablet and mobile in JavaScript, HTML and CSS
- Implemented 100+ custom UI features (forms, dynamic interactions, reusable JS functions) across client sites • Extended the shared UI-block library by 30+ components to match new Figma designs and client requirements

EDUCATION

Technical College, Poland — Computer Science Technician Diploma

2020 – 2025 | Technical/vocational degree in Computer Science; coursework covered programming fundamentals and web development basics

CERTIFICATIONS

GoIT — Fullstack Developer Program

2024 – 2025 | Ukraine, remote

LANGUAGES

Polish — Professional | Ukrainian — Native | Russian — Native | English — Conversational

SKILLS

JavaScript JavaScript (ES6+), TypeScript — frontend and backend, DOM, OOP fundamentals (theoretical)

Frontend React, Next.js, SolidJS, Redux, Tailwind CSS, SCSS

Backend Node.js, Express.js, NestJS, Prisma, REST API, WebSocket — used in production (Verba GTA) **Database** PostgreSQL, MongoDB

DevOps & Tools Git, GitHub, Docker (basics, self-study), Vite, Axios, Swagger, Figma **Soft Skills**
Technical Ownership, Performance Mindset, Code Quality, Continuous Learning
